

Maria and Alex Vides  
IASIS Treatment

After four sessions of IASIS, their son, Yohanny, who is diagnosed on the autism spectrum, has had significant improvement.

SLEEP: Yohanny used to be very disruptive. He would wake several times throughout the night. Now he is sleeping through the night, every night.

SPEECH: Yohanny was barely speaking and was hard to understand. Now he is able to communicate and is not showing signs of frustration.

ATTENTION: Yohanny's teacher has noted great improvement in focus, concentration and temperament. He is calmer and more peaceful, sits still. He used to cry a lot, now listens after first time of instruction.

Overall, Maria and Alex Vides highly recommend and are pleased with IASIS results.
